Levitation Labs debuts showroom, products

Erin Berg, January 17, 2017

LAS VEGAS – In its new Las Vegas Market showroom, Levitation Labs will unveil two new mattress encasement systems and a patented zipper enclosure system.

The UpLIFT and GlideON mattress encasement systems provide mattress protection with easy installation for the consumer by allowing the mattress to be slid into the encasement rather than the other way around. The hypo-allergenic encasements can be removed and installed while holding an optional bed skirt in place. Company officials said the new systems allow consumers to easily rotate their mattress over a patented slick bottom surface, conforming to mattress warranty rotation requirements.

Levitation Labs will also introduce its newly patented ZipSeal zipper enclosure system as an add-on accessory to GlideON and UpLIFT protectors. ZipSeal surrounds and seals the encasement's zipper securely in place for 360-degree anti-allergen, anti-dust-mite, and anti-microbial mattress protection.

According to Bill Scarleski, chief innovations officer at Levitation Labs, "It used to take a small team of people to lift a heavy mattress off of its foundation, install a mattress encasement over the top of it, and somehow get it all back in order without incident. We knew there had to be a better way."

Levitation Labs showroom is located in Building B, space 956.

Introductions from Levitation Labs will complement its flagship UpLIFT system.
